

Model: CA-UD5B

Description: USB/A-Micro USB, 2.5mm DC split cable, 120cm, Black

The Nexmosphere Nano range is complemented with the cables needed for communication and power supply. When using XN models with a USB interface, the USB port of the connected device also provides power to the Nexmosphere controller. Most USB ports supply enough power to the Elements without the need for additional power, except when connecting LEDs. When using LEDs consider the use of a USB split cable together with a power supply to provide enough power or consult us for advice. When using the XN models with a serial connection, the use of a power supply is always required.

- Cable length: 1.2 m
- Connector 1: Micro-USB A
- Connector 2: USB A
- Product colour: Black
