### Remote

Lo compre y tiene muy buen alcance 🍷 realmente es bueno

**Adrianyelis P** | 03/05/2026

**Love it!**

I've had this on my 05 Silverado for a number of years now. Still no issues. The range is incredible, with line of sight I'm getting about an 1/8th mile of range to remote start my truck. Doesn't eat batteries, and being able to activate the remote start while it's running is fantastic, as you can pull up to a convenience store, hit the remote start, pull your keys out, lock the doors, run inside and your engine (and heater!) Is still running! A+!

## Bring your legacy car up to date

Installed this on my old 2003 4runner. I love my SUV, still run strong after all this years and it's all paid off. Drone mobile gives me remote start and other telematics that you find in most modern cars. I love how I can precondition my car while inside the house especially with the hot summer temp.

## No instructions

Do your research! This is a great product, unfortunately they don't offer details installation instructions like other brands.

Compustar is a professional installation brand not designed for DIY.

If you buy this you'll also need the programmer to adjust settings or have to go to an installer for these adjustments.

I spent twice as long figuring out how to wire this unit into my truck as I did actually installing it. Luckily I found a good forum with an article from a guy who documented the wiring.

Would have given it 5 stars if they had instructions.

## You have to have a professional installer flash it buyers beware

I couldn't install it because it has to be flashed by a professional installer who could possibly charge you up to \$300 just to flash it. I can't speak for the actual system because I returned it
