

TruAudio's patented 2-millimeter reveal, magnetic frameless grills for our Ghost and Revolve series speakers attach easily and covers the speaker lip. Once installed, no part of the speaker shows except for the grill, allowing the speaker to virtually disappear into the installation environment. Comes in white or black, and is paintable to fit into any room.

If you are going to paint your speaker grills, we suggest painting the grills before installation. The Ghost Series is a frameless speaker and will save you time on labor. Painting the grill beforehand will ensure that it is ready to install at the same time as the speakers. When painting the grills, it is VERY IMPORTANT that you remove the cloth like material (Dacron) from the grill before painting, then you can paint the grills lightly and be careful not to clog the holes. Depending on the thickness of the paint, you may want to thin it down and spray a few light coats. This will help prevent clogging the grill holes.

Tip: Always keep compressed air nearby to lightly blow paint buildup from the holes.
